Municipality Web Accessibility

Automated WCAG 2.1 AA Compliance Scan — EU Directive 2016/2102

Slovenia — Municipality Accessibility at a Glance

207

MUNICIPALITIES
SCANNED

16.3

AVERAGE SCORE (/100)

93%

DO NOT PASS CHECK

3%

PASS AUTOMATED
CHECK

93% of Slovenia municipality websites **do not pass** the automated WCAG accessibility check. Only 3% of scanned sites pass.

The average compliance score across 207 scanned municipality homepages is **16.3/100**. A total of **9286** individual accessibility violations were detected, averaging **44.9** issues per site.

Score Distribution

7	8	192	51
CATEGORY	COUNT	%	DEFINITION
PASS	7	3%	Score ≥ 80 — passes automated check
NEEDS WORK	8	4%	Score 50–79 — partially accessible
FAIL	192	93%	Score < 50 — does not pass automated check
NOT SCANNED	51	—	Website unavailable or scan failed

Most Common Accessibility Violations

The table below lists the 10 most frequent axe-core rule violations found across Slovenia municipality homepages.

#	RULE	IMPACT	DESCRIPTION	OCCURRENCES	SITES
1	color-contrast	SERIOUS	Ensure the contrast between foreground and background colors meets WCAG 2 AA minimum contrast ratio thresholds	6206	171
2	aria-valid-attr	CRITICAL	Ensure attributes that begin with aria- are valid ARIA attributes	865	23
3	image-alt	CRITICAL	Ensure elements have alternative text or a role of none or presentation	780	149
4	link-name	SERIOUS	Ensure links have discernible text	524	104
5	aria-command-name	SERIOUS	Ensure every ARIA button, link and menuitem has an accessible name	262	132
6	aria-required-parent	CRITICAL	Ensure elements with an ARIA role that require parent roles are contained by them	214	132
7	link-in-text-block	SERIOUS	Ensure links are distinguished from surrounding text in a way that does not rely on color	117	103
8	aria-prohibited-attr	SERIOUS	Ensure ARIA attributes are not prohibited for an element's role	113	63
9	aria-input-field-name	SERIOUS	Ensure every ARIA input field has an accessible name	53	24
10	aria-required-children	CRITICAL	Ensure elements with an ARIA role that require child roles contain them	52	23

Municipality Ranking — Top & Bottom Performers

Methodology & Limitations

Testing Tool

[axe-core](#), the open-source accessibility testing engine maintained by Deque Systems. It is the most widely used automated accessibility testing library and powers the accessibility checks in Chrome DevTools and Lighthouse.

Standard

WCAG 2.1 Level AA — the standard referenced by EU Directive 2016/2102 (Web Accessibility Directive) and harmonised European standard EN 301 549.

Scope

- Homepage only (crawl depth = 1). Subpages are not scanned.
- One domain per municipality (primary official website).
- Scores range from 0 (worst) to 100 (best).

Important limitation: Automated tools detect approximately 30–50% of WCAG 2.1 criteria. A site that does not pass the automated check is certainly non-compliant. A site that passes may still have accessibility barriers detectable only through manual expert review. These scores represent a **floor**, not a ceiling, of real-world accessibility issues.

Data Collection

Municipality websites were collected from official national registers, Eurostat LAU codes, and Wikidata. Domains were validated via DNS resolution and HTTP checks. Scans were performed using headless Chromium via Playwright + axe-core.
